

CONCLUSIONS

It makes sense to remember neuro-Behçet's disease in the differential diagnosis of neurologic manifestations accompanied by specific systemic symptoms for Behçet's disease like recurrent oral and genital ulcers, uveitis or other systemic features.

Although there isn't any specific paraclinical examination to be done, there are some examinations and investigations if there is a big suspicion of Behçet's disease. Neuro-Behçet's disease has some characteristic clinical features and an accurate clinical examination helps to diagnose it.
